1 Context-based prefetch – an optimization for implementing objects on relations

Philip A. Bernstein, Shankar Pal, David Shutt

 December 2000 **The VLDB Journal – The International Journal on Very Large Data**
Bases, Volume 9 Issue 3

Publisher: Springer-Verlag New York, Inc.

 Full text available: pdf(142.24 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

When implementing persistent objects on a relational database, a major performance issue is prefetching data to minimize the number of round-trips to the database. This is especially hard with navigational applications, since future accesses are unpredictable. We propose the use of the context in which an object is loaded as a predictor of future accesses, where a context can be a stored collection of relationships, a query result, or a complex object. When an object O's state is loaded, similar ...

1 [Development of an object-oriented DBMS](#)

David Maier, Jacob Stein, Allen Otis, Alan Purdy

 June 1986 **ACM SIGPLAN Notices , Conference proceedings on Object-oriented programming systems, languages and applications OOPSLA '86**, Volume 21
Issue 11

Publisher: ACM Press

Full text available: pdf(1.12 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We describe the results of developing the GemStone object-oriented database server, which supports a model of objects similar to that of Smalltalk-80. We begin with a summary of the goals and requirements for the system: an extensible data model that captures behavioral semantics, no artificial bounds on the number or size of database objects, database amenities (concurrency, transactions, recovery, associative access, authorization) and an interactive development environment. Object-orient ...

2 [Usage and relationships: An architecture for the aggregation and analysis of scholarly usage data](#)

Johan Bollen, Herbert Van de Sompel

 June 2006 **Proceedings of the 6th ACM/IEEE-CS joint conference on Digital libraries JCDL '06**

Publisher: ACM Press

Full text available: pdf(753.90 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Although recording of usage data is common in scholarly information services, its exploitation for the creation of value-added services remains limited due to concerns regarding, among others, user privacy, data validity, and the lack of accepted standards for the representation, sharing and aggregation of usage data. This paper presents a technical, standards-based architecture for sharing usage information, which we have designed and implemented. In this architecture, OpenURL-compliant linking ...

Keywords: OAI-PMH, aggregation, analysis, architecture, digital libraries, openURL, standards, usage data

3 [An interactive high-level debugger for control-flow optimized programs](#)

Polle T. Zellweger

 March 1983 **ACM SIGPLAN Notices , ACM SIGSOFT Software Engineering Notes , Proceedings of the symposium on High-level debugging SIGSOFT '83**

Volume 18 , 8 Issue 8 , 4

Publisher: ACM PressFull text available:  pdf(1.10 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

The transformations performed by an optimizing compiler have traditionally impeded interactive debugging in source language terms. A prototype system called Navigator has been developed for debugging optimized programs written in Cedar, an Algol-like language. Navigator can be used to monitor program execution flow in the presence of two optimizations: inline procedure expansion and cross-jumping (merging identical tails of code paths that join). This paper describes the problems that these two ...

4 [Towards a framework for learning structured shape models from text-annotated images](#)

Sven Wachsmuth, Suzanne Stevenson, Sven Dickinson

May 2003 **Proceedings of the HLT-NAACL 2003 workshop on Learning word meaning from non-linguistic data - Volume 6****Publisher:** Association for Computational LinguisticsFull text available:  pdf(278.87 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We present on-going work on the topic of learning translation models between image data and text (English) captions. Most approaches to this problem assume a one-to-one or a flat, one-to-many mapping between a segmented image region and a word. However, this assumption is very restrictive from the computer vision standpoint, and fails to account for two important properties of image segmentation: 1) objects often consist of multiple parts, each captured by an individual region; and 2) individual ...

5 [The ObjectStore database system](#)

Charles Lamb, Gordon Landis, Jack Orenstein, Dan Weinreb

October 1991 **Communications of the ACM**, Volume 34 Issue 10**Publisher:** ACM PressFull text available:  pdf(6.73 MB)Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

Keywords: C++, ObjectStore, database (persistent) programming languages, object-oriented programming
